NAMING		The spelling of street names for associated objects from the official cadastral survey (AV) and the Federal Register of Buildings and Dwellings (GWR) differs. Differences in uppercase and lowercase letters are also considered. Compound street names are also case-sensitive.	The spelling of street names must be verified and standardized in both registers (AV and GWR): • If the spelling in the AV is correct, the municipality must be contacted to make the correction in the GWR. • If the spelling in the GWR is correct, then the error must be reported directly to the office responsible for the AV in the relevant canton.
SEGMENTATION		The feature consists of several segments that are spatially separated but more than 200 m apart from one another.	The error must be reported directly to the office responsible for the AV in the relevant canton.
GWR ONLY		These streets appear only in the GWR; there is no corresponding entry in the AV, or the spelling is too different.	Streets that appear only in the GWR must be validated by the GWR coordination office of the relevant canton. These may include streets that also appear in the «Only AV» category but could not be mapped for various reasons. (Example: missing or different ZIP code). Missing streets must be added to the AV data, if applicable. **Important:** For a building address to be published in the official building address directory, an **official street** (street, square, or designated area) is required. This means that an unvalidated street must first be «made official». Geometry is required for this step.
AV ONLY		Streets whose geometry comes from the AV, but without a corresponding entry in the GWR. Either the street has not been registered in the GWR, or the spelling of a potentially corresponding street differs too much.	If there are streets in this category, they must be validated by the department responsible for the AV in the relevant canton and, depending on the situation, modified or deleted. **Important:** Streets cannot be deleted if a building address in the GWR refers to that street. **Note:** When recording streets in this error category in the GWR, it is important to ensure that no street is recorded more than once

BLACKLISTED	■	Blacklisting occurs automatically based on defined criteria: 1. If a street appears only in the GWR, has the status «obsolete», and no addresses are associated with it anymore. 2. If a street appears only in the AV and **does not** have the attribute value combination ISTOFFIZIEL-LEBEZEICHNUNG=ja & STA-TUS=real	The handling of this «issue» depends on the specific case: 1. The municipality concerned must verify whether the street should be deleted. If so, the street must be deleted from the GWR. 2. The office responsible for the AV in the relevant canton must verify whether the street should be deleted. If so, the street must be deleted from the AV.
